★ WHO AM I?

I'm a **functional programmer** and a **programming languages researcher**. I love building and working with type systems, testing tools, static analyses, and domain-specific languages. I delight in applying meaningful theory to solve real problems, and I seek to use my craft as a computer scientist to make a positive difference for programmers and for the world.

★ EDUCATION

University of Pennsylvania *(Philadelphia, PA)* — May 2018
MASTER OF SCIENCE IN ENGINEERING in Computer and Information Science

> Advised by Dr. Stephanie C. Weirich
> Teaching: *Advanced Programming (Haskell), Software Foundations (Coq)*

Brandeis University *(Waltham, MA)* — May 2015
BACHELOR OF SCIENCE in Computer Science *summa cum laude* with highest departmental honors

> Advised by Dr. Harry G. Mairson
> Thesis: *Getting a Quick Fix on Comonads* (later published in *Haskell Symposium '15*)
> Teaching: *Functional Programming (Haskell), Structure & Interpretation of Computer Programs (Scheme)*

★ EXPERIENCE

Galois *(Arlington, VA/Remote)* — 2018 – present
SOFTWARE ENGINEER/RESEARCHER

> I work on multiple projects: developing a verification API for tamper-resistant elections technology, implementing a typed programming language for high assurance shell scripts, and building new front-end functionality for the SAW/Cryptol suite of open-source program analysis tools.

Microsoft Research *(Redmond, WA)* — Summer 2016
RESEARCH INTERN

> I formalized the metatheory of several small programming languages as a stress test for the experimental Dafny language/proof assistant, and designed an intermediate language to verify a multi-part compilation pipeline. I contributed to Dafny's development, implementing bug fixes and feature improvements.

Galois *(Portland, OR)* — Summer 2015
RESEARCH INTERN

> I implemented a user-friendly interactive code generation utility for the open-source SAW suite of program analysis tools, designed to help cryptography domain experts get started more easily with automated formal verification. In a separate project, I worked on the design of a prototype graph query language.

Galois *(Portland, OR)* — Summer 2014
RESEARCH INTERN

> I created an embedded domain-specific language for secure distributed computations, implemented using oblivious secret-sharing protocols. I developed an optimizing compiler, and an efficient bytecode interpreter which was several times faster than the previous best results on a series of established benchmarks.

MIT Lincoln Laboratory *(Lexington, MA)* — Summer 2013
RESEARCH INTERN

> I prototyped applications and protocols to evaluate experimental frameworks for dynamic information flow control (IFC). Within one of these, I implemented a secure distributed multi-player game of *Battleship*, and contributed to a comparative analysis of IFC frameworks published in PLAS '14.

★ Publications/Talks

ICFP '18: Keep Your Laziness in Check. <u>K. Foner</u>, H. Zhang, and L. Lampropoulos. In *Proceedings of the 2018 ACM SIGPLAN International Conference on Functional Programming*.

ICFP '18: "Keep Your Laziness in Check" (talk)

ICFP '18: What's the Difference? A Functional Pearl on Subtracting Bijections. B. Yorgey and <u>K. Foner</u>. In *Proceedings of the 2018 ACM SIGPLAN International Conference on Functional Programming*.

Haskell '17: Ode on a Random Urn (Functional Pearl). L. Lampropoulos, A. Spector-Zabusky, and <u>K. Foner</u>. In *Proceedings of the 2017 ACM SIGPLAN Symposium on Haskell*.

C∘mp∘se '17: "Choose Your Own Derivative" (talk)

TyDe '16: Choose Your Own Derivative (Extended Abstract). J. Paykin, A. Spector-Zabusky, and <u>K. Foner</u>. In *Proceedings of the 2016 ACM SIGPLAN Workshop on Type-Driven Development*.

C∘mp∘se '16: "*There and Back Again* and What Happened After" (talk)

Haskell '15: Functional Pearl: Getting a Quick Fix on Comonads. <u>K. Foner</u>. In *Proceedings of the 2015 ACM SIGPLAN Symposium on Haskell*.

Haskell '15: "Functional Pearl: Getting a Quick Fix on Comonads" (talk)

PLAS '14: You Sank My Battleship!: A Case Study in Secure Programming. A. Stoughton, A. Johnson, S. Beller, K. Chadha, D. Chen, <u>K. Foner</u>, and M. Zhivich. In *Proceedings of the 2014 ACM Workshop on Programming Languages and Analysis for Security*.

★ Programming Background

Expert Knowledge: Haskell – I've been programming in Haskell for more than five years. I've authored libraries using advanced type-system extensions, implemented compiler plugins, and published novel research about high-performance immutable data structures, strictness analysis, and generic programming.

Professional Experience: Rust – I currently use Rust in my day-to-day work. I've used it to implement interpreters, compilers, type-checkers, and a memory-efficient deserialization library.

Academic Experience: OCaml, Coq, Scheme – I've used these languages in my academic career to collaborate on research, create course materials, and teach university classes.

Past Experience: Clojure, Python, C, Java – I've used these languages in less-recent work, in university courses, or in hobby projects. I can read them, and I'm comfortable working in them with the aid of reference materials.

★ Open Source

I'm the primary author and maintainer of the **StrictCheck** library for randomized dynamic demand analysis, and an author and maintainer of the **Urn** data structure for updateable discrete probabilistic sampling. I'm a current contributor to the **Cryptol** specification language and the **Software Analysis Workbench**. I've also contributed to the **Glasgow Haskell Compiler** and the **Dafny** language.
